Volume Profile Kya Hai?

Volume Profile ek powerful trading tool hai jo yeh batata hai ki **kaunsi price par kitna volume trade hua**. Normal volume indicator sirf time ke saath volume dikhata hai — lekin Volume Profile price ke saath volume dikhata hai.

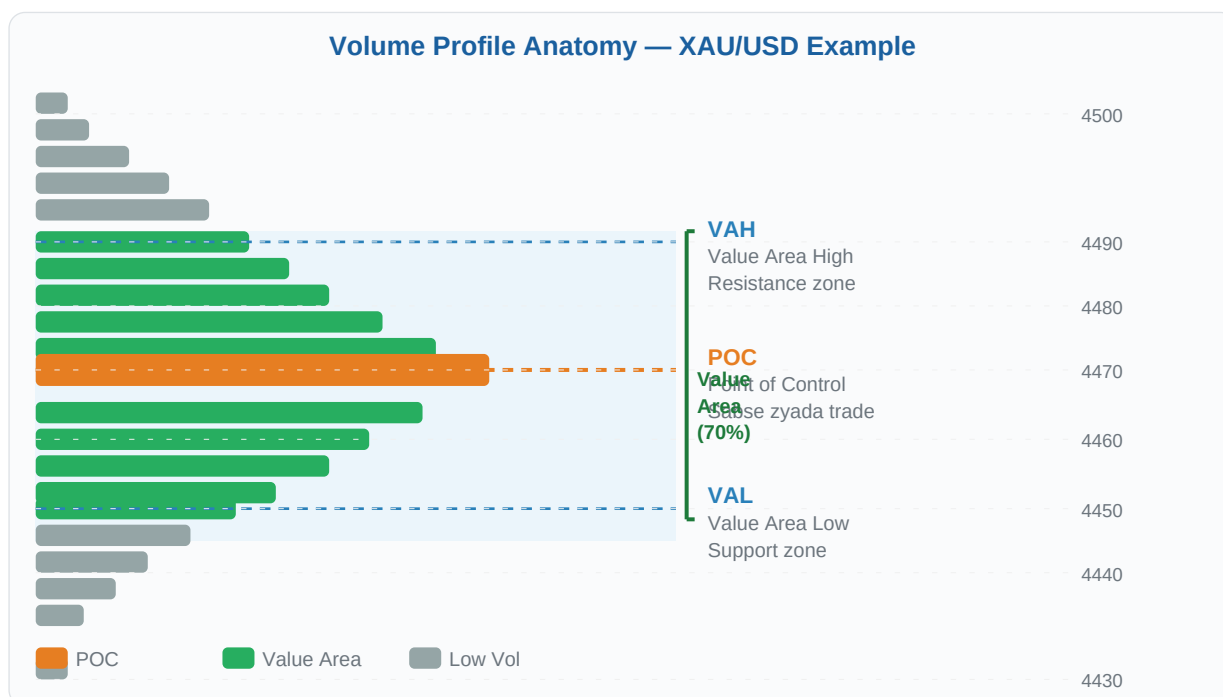

i INFO

Sochiye: 100 log market mein trade kar rahe hain. 60 log 4,470 ke paas trade karte hain, 20 log 4,490 par, 20 log 4,450 par. Toh 4,470 = HIGH VOLUME area = sabka "fair price". Yahi POC ban jaata hai.

Volume Indicator vs Volume Profile — Fark kya hai?

Normal Volume Indicator	Volume Profile
Time ke saath volume dikhata hai	Price ke saath volume dikhata hai
Candle ke neeche bar hoti hai	Chart ke side par horizontal bar hoti hai
Kab trade hua — yeh batata hai	Kahan trade hua — yeh batata hai
Support/resistance nahi dikhata	Exact S/R levels deta hai

Volume Profile ka Visual — Kaisa dikhta hai?

Upar diagram mein: Orange bar (POC) sabse lamba hai — yahan sabse zyada trading hui. Green zone = Value Area (middle 70% volume). Gray bars = kam volume wale levels.

1. POC — Point of Control

Profile ka **sabse lamba bar**. Yeh woh price hai jahan iss time period mein sabse zyada buying aur selling hui.

Property	Detail
Definition	Highest volume price level in selected range
Behaviour	Market baar baar yahan wapas aata hai — "magnetic" level
Trend mein	Uptrend: price POC ke upar — POC = support. Downtrend: POC ke neeche — POC = resistance
Best Use	Entry zone, tightest SL placement, mean reversion target
Color (chart)	Orange/Yellow — profile ka sabse prominent bar

+ TIP Real Example: Gold (XAU) ki chart par agar 4,470 POC hai aur price 4,480 se girti hai 4,470 par — yahan buy karo. POC pe price bounce karne ki probability bahut high hoti hai.

2. VAH — Value Area High

Value Area ka upar ka boundary. Middle 70% volume ke zone ka high point. Yeh ek strong resistance hoti hai jab price bahar se andar aane ki koshish kare.

*** RULE** Rule: Agar price VAH ke upar close kare — **bullish breakout confirm**. Agar VAH se reject ho — **short entry opportunity**. Aapki Gold chart mein Asian session ka VAH = 4,520 area tha.

3. VAL — Value Area Low

Value Area ka neeche ka boundary. Jab price VAL ke paas aaye, yeh strong support hoti hai. Agar VAL break ho jaaye, bearish pressure strong hai.

! CAUTION CAUTION: VAL break + retest = Short entry. Lekin agar quickly wapas VAL ke andar jaaye = "False Breakdown" — yeh trap hota hai. Confirmation candle ka wait karo.

4. HVN aur LVN — Bonus Levels

Level	Naam	Behaviour	Trading Use
HVN	High Volume Node	Strong S/R — price yahan slow hoti hai	Entry, target

LVN	Low Volume Node	Price yahan se FAST move karti hai — koi resistance nahi	Tight SL, fast move expect karo
-----	-----------------	--	---------------------------------

Fixed vs. Rolling Profile — Kab Use Karein?

Volume Profile do tarah se use hoti hai: **Fixed** (specific range) aur **Rolling/Visible Range** (screen dikhta hua sab). Dono ka use alag situations mein hota hai.

Type	Kaise Kaam Karta Hai	Best Use	Example
Fixed Range	Aap manually start aur end date/time select karte ho	Specific session, day, week ya event ka analysis	Sirf Asian session ka profile lagao
Visible Range	Jo candles screen par dikh rahi hain unka profile automatically	Quick overview, naya trader ke liye	15m chart khola, sabka ek saath profile
Session Volume	Har session automatically alag profile banata hai	Multi-session analysis — BEST METHOD	Asian + London + NY alag alag POC
Composite	Multiple sessions combine karke ek profile	Week ya month ka overall picture	Puri week ka POC = week ka fair value

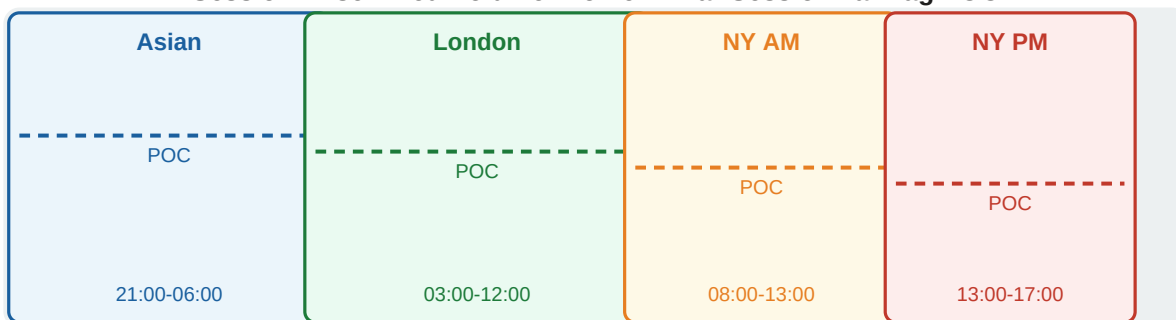

+ TIP

RECOMMENDED SETUP: TradingView par "Fixed Range Volume Profile" tool use karo. Asian session start se end tak select karo → POC, VAH, VAL note karo. Phir London ke liye. Phir NY ke liye. Teen alag profiles = teen alag "fair prices" = confluence zones milenge.

Session-Wise Profile — Asian/London/NY Method

Gold (XAU/USD) mein session-wise volume profile sabse powerful method hai. Kyunki har session ke alag participants hote hain — Asia ke banks, London ke hedge funds, NY ke institutions. Har session apna "fair price" establish karta hai.

Session-Wise Fixed Volume Profile — Har Session ka Alag POC

Upar: Har session ka alag Fixed Profile aur alag POC. Jab do sessions ka POC overlap kare — woh STRONGEST level ban jaata hai.

Gold Trading Sessions — Indian Standard Time

Session	IST Time	Character	Gold Behaviour
Asian	02:30 - 11:30 IST	Low volatility, range-bound	Range banata hai, London ke liye liquidity set karta hai
London	08:30 - 17:30 IST	High volatility, breakouts	Asian range ko break karta hai, strong moves
NY AM	13:30 - 18:30 IST	Highest volatility, news	Biggest gold moves, US data pe reaction
NY PM	18:30 - 22:30 IST	Dwindling, range close	Consolidation, day ka summary

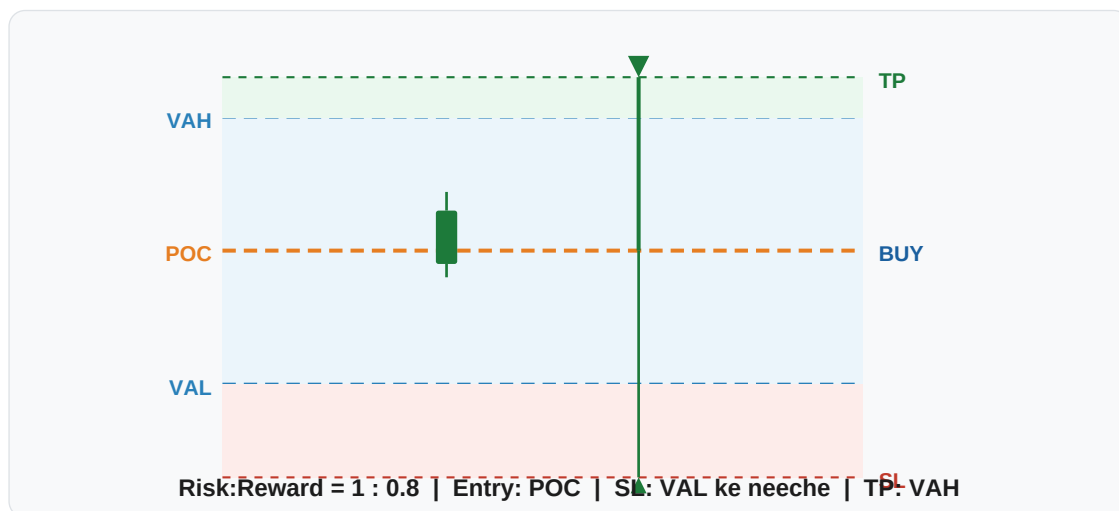

* RULE

Step-by-step: (1) Asian session end par POC note karo. (2) London open par — agar price Asian POC ke upar hai = bullish bias. Neeche hai = bearish. (3) NY AM mein London POC ke saath confluence dhundho — wahan entry lo.

5 Advanced Trade Setups with Real Examples

Setup 1: POC Rejection — Easiest Setup

Jab price POC par aaye aur **reject ho jaaye** — yeh sabse reliable entry hoti hai. Market baar baar POC ko "fair value" maanta hai, isiliye wahan se bounce aata hai.

Setup 1: Price POC par aaya, bounce diya, long entry liya. SL = VAL ke 3 ticks neeche. TP = VAH. Clean 1:2+ R:R.

LIVE EXAMPLE — XAU/USD 15M (Aapki Chart)

Context: NY AM session. Gold 4,470 ke paas tha. London session ka POC = 4,468.

Entry Signal: Price 4,468 par aaya, bearish candle ke baad bullish engulfing bana.

Entry: 4,468 par BUY (market ya limit order)

Stop Loss: 4,460 (VAL ke 3 ticks neeche) — Risk = 8 points

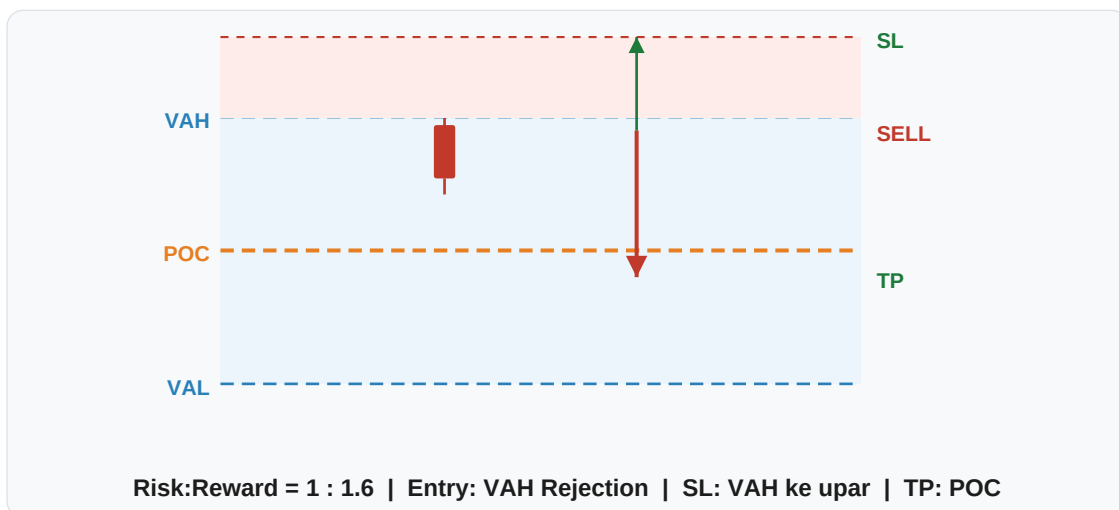

Target 1: 4,490 (VAH) — Reward = 22 points — R:R = 1:2.7

Target 2: Asian session high = 4,510 — R:R = 1:5.25

Result: Price ne 4,490 hit kiya = 22 point profit on 0.1 lot = \$220

Setup 2: VAH Rejection — Short Setup

Jab price **VAH ko test kare aur fail ho jaaye** — strong short entry. VAH ke upar close na ho toh bearish pressure strong hai.

Setup 2: Price VAH par aaya, rejection candle bana, short entry. SL = VAH ke upar. TP = POC first, then VAL.

LIVE EXAMPLE — XAU/USD (Asian to London Transition)

Context: Asian session ne 4,480-4,520 range banaya. VAH = 4,520.

London open par price 4,519 gaya aur doji/shooting star bana.

Entry: 4,516 par SELL (confirmation ke baad)

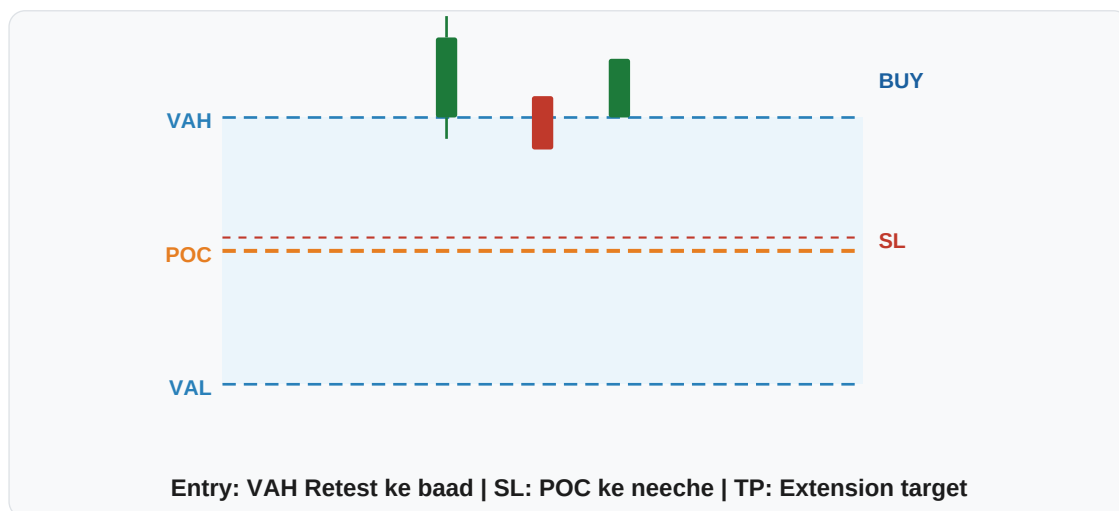

Stop Loss: 4,525 (VAH ke 5 ticks upar) — Risk = 9 points

Target 1: 4,500 (Asian POC) — Reward = 16 points — R:R = 1:1.7

Target 2: 4,485 (VAL area) — Reward = 31 points — R:R = 1:3.4

Setup 3: VA Breakout + Retest — Momentum Setup

Jab price **Value Area ke bahar close ho** aur phir retest kare — strong momentum trade. VAH ya VAL agar new support/resistance ban jaaye toh entry lo: ----- TP

Setup 3: Price ne VAH break kiya, retest kiya (VAH = new support), phir bounce — long entry. Strong momentum trade.

! CAUTION

RULE: Breakout ke baad minimum 2 candle wait karo confirmation ke liye. Agar immediately wapas VA mein ghus jaaye — trap hai, entry mat lo. Yeh "Failed Breakout" hota hai aur opposite direction mein trade karo.

Setup 4: LVN Speed Trade — Fast Profit Setup

LVN (Low Volume Node) areas mein price **bahut tezi se move karti hai** kyunki yahan koi significant buying ya selling nahi hai. Ek baar price LVN mein ghuse, next HVN tak fast move expect karo.

LVN SPEED TRADE — How to Identify

- Step 1: Profile mein thin (short) bars dhundho — yeh LVN hai.
- Step 2: Upar aur neeche ke HVN (thick bars) note karo — yeh targets hain.
- Step 3: Jab price LVN enter kare, entry lo. SL = LVN ke bahar.
- Step 4: TP = next HVN ya POC. Price yahan fast pahunchti hai.

Gold Example: 4,455-4,462 ek LVN tha (thin bars). Jab price 4,455 cross kiya, 4,470 (next HVN) tak 7 candles mein pahunch gayi — fast 15 point move.

Setup 5: Multi-Session POC Confluence — BEST Setup

Jab **do ya teen sessions ka POC ek hi price par ya paas mein ho** — yeh sabse powerful level hota hai. Institutions wahan positions lete hain.

Session	POC Level	Confluence?	Action
---------	-----------	-------------	--------

Asian	4,468		Note karo
London	4,470		Asian se +2 points
NY AM	4,469	YES! 3 POC = 4,468-4,470	STRONG BUY ZONE!

Stop Loss aur Target — Exact Rules

Volume Profile ka sabse bada advantage yeh hai ki yeh **exact SL levels deta hai** — guessing nahi, structure-based SL.

Setup	Entry	Stop Loss	Target 1	Target 2
Long at POC	POC par buy	VAL ke 3t neeche	VAH	Next HVN
Short at VAH	VAH par sell	VAH ke 3t upar	POC	VAL
Long at VAL	VAL bounce par buy	VAL ke 5t neeche	POC	VAH
Long Breakout	VAH retest par buy	POC ke neeche	+1 ATR	+2 ATR
LVN Speed	LVN enter hone par	LVN ke dusre end par	Next HVN	POC

INFO "3t" = 3 ticks = XAU mein approximately 30 cents ya 3 pips. Har broker mein tick size alag hoti hai — apne platform par check karo.

Position Sizing — Kitna Risk Lein?

Account Size	Max Risk per Trade	SL = 10 pts, Lot Size	Potential Profit (1:2)
\$1,000	\$20 (2%)	0.02 lot	\$40
\$5,000	\$100 (2%)	0.10 lot	\$200
\$10,000	\$200 (2%)	0.20 lot	\$400

! CAUTION GOLDEN RULE: Kabhi bhi ek trade mein 2% se zyada risk mat lo. Volume Profile bahut accurate levels deta hai — lekin market kabhi 100% predictable nahi hota.

Multi-Timeframe Confluence Strategy

Professional traders sirf ek timeframe nahi dekhte. **3-timeframe method** use karo: HTF se direction lo, MTF se level confirm karo, LTF se entry lo.

Timeframe	Purpose	Volume Profile Type	What to Find
4H / Daily (HTF)	Bias — Kaunsi direction mein trade karein?	Weekly ya Daily Composite Profile	Weekly POC ke upar/neeche? = Bullish/Bearish
1H (MTF)	Zone confirm karo — kahan entry karein?	Session Fixed Profile (Asian/London)	1H POC, VAH, VAL note karo
15M / 5M (LTF)	Exact entry timing — kab entry karein?	Current session profile	Rejection candle, engulfing, pin bar dekho

Trade Decision — Step by Step Checklist

1	Daily/4H chart dekho Price weekly POC ke upar hai? = Bullish. Neeche? = Bearish.
2	1H profile lagao Current session ka POC, VAH, VAL note karo.
3	Confluence check karo Kya 1H POC aur session POC paas paas hain? = Strong zone.
4	15M pe entry signal dekho Rejection candle, engulfing, pin bar — confirmation ka wait karo.
5	SL aur TP set karo SL = VAL/VAH ke paas. TP = opposite boundary ya next session POC.
6	R:R check karo Minimum 1:1.5 hona chahiye. 1:2 ya upar ideal hai.

Common Mistakes aur Unse Kaise Bachein

Mistake: Sirf ek session ka profile dekhna

Solution: Session profile sirf uss session ke liye valid hai. Har session ka alag profile lagao.

Mistake: POC pe blindly entry lena (no confirmation)

Solution: POC ek zone hai, not a guaranteed bounce. Rejection candle ya price action confirm hone ke baad entry lo.

Mistake: LVN mein trade hold karna

Solution: LVN mein price fast move karti hai — SL tight rakho ya quickly trail karo. LVN mein hold karna risky hai.

Mistake: HTF bias ignore karna

Solution: Agar daily chart bearish hai aur tum 15M par long le rahe ho POC se — yeh 1H mein pooch lo: HTF support karta hai kya?

Mistake: Profile too narrow ya too wide set karna

Solution: Narrow = incomplete picture. Wide = bahut average POC milega. Session-specific range select karo — start se end tak.

Mistake: Volume Profile ko indicators ke saath confuse karna

Solution: VP ke sath RSI ya MACD dhundho — overbought/oversold + VP level = extra confirmation. VP alone kaafi hai par aur tools se strengthen karo.

Quick Reference Cheat Sheet

Yeh page print karke screen ke paas rakh lo — trading karte waqt quick reference ke liye.

LEVEL	KYA HOTA HAI	PRICE ABOVE	PRICE AT	PRICE BELOW
POC	Highest volume price	Support — buy dips	Mean reversion trade	Resistance — sell rallies
VAH	Value Area upper boundary	Bullish — breakout mode	Short entry zone	Price in VA — mean rev.
VAL	Value Area lower boundary	Price in VA — mean rev.	Long entry zone	Bearish — breakdown mode
HVN	Thick bars = lots of trade	Strong support	Price slows here	Strong resistance
LVN	Thin bars = little trade	Price speeds up here	Fast move expected	Price speeds up here

Entry Rules — Quick Reference

SETUP	ENTRY TRIGGER	SL	MIN R:R
POC Long	Bullish candle at POC	VAL -3t	1:1.5
POC Short	Bearish candle at POC	VAH +3t	1:1.5
VAH Short	Rejection at VAH	VAH +5t	1:2
VAL Long	Bounce at VAL	VAL -5t	1:2
Breakout	Retest after close outside VA	POC	1:2
LVN Speed	Price enters LVN zone	LVN far edge	1:1.5

* RULE

FINAL MANTRA: "Profile batata hai KAHAN trade karo. Price action batata hai KAB entry lo. R:R batata hai AYA TRADE LENA HAI YA NAHI." Teeno align ho tabhi trade lo.
